

PRO-HEALTH

In 1984 **Pro-Health** opened up for business and was involved with health foods for human consumption. In 1994 **Pro-Health** was established as we made a change to get into the natural health additives for animals. Pro-Health put together a calf product that is marketed under several different names such as Calf Tech 2000, Prime Calf, and Pro-Calf Aid. The products main ingredient was the stable probiotic that was added in order to take the heat of hot water mixing. (Pro-Calf Aid has one other ingredient, COLOSTRUM).

This Probiotic is the most stable bacteria on the market and works under more severe conditions than any probiotic **Pro-Health** has used. **Pro-Health** has a full line of probiotic products for the dairy, equine, swine and beef industry.

Pro-Health is constantly on the look out for better ingredients to help “you” better your operation.

Pro-Calf Aid™

With COLUSTRUM

Growth

Stress

Appetite

Pro-Calf Aid™

STRESS

Shipping calves, sudden weather changes, starting baby calves, lost appetite, after heavy drug use.

ABOUT PRODUCT

Water soluble, easy to mix in milk or milk replacer, the best water soluble vitamins you can buy, mix with most drugs, and probiotic will remain viable.

BENEFITS

Try Pro-Calf Aid™ on your operation, and see the difference in appetite, stool consistency, and calves eating sooner.

What are probiotics?

Researchers found at the beginning of the 1900's a beneficial response while experimenting with yogurt and sour milk preparations in treating intestinal disorders. Additional investigation isolated specific species of micro-organisms from these preparations which had the capability of excreting large amounts of Lactic Acid. In 1933 researchers at Cornell University discovered that all warm blooded animals had the same Lactic Acid producing micro-organisms in their small intestines. It then required an additional 20-25 years to discover the exact cause/effect benefit relationship between the Lactic Acid producing micro-organisms contained in yogurt sour milk preparations and those which made up a major portion of a normal intestinal micro-flora in all warm blooded animals. After 30 years, we now know what probiotics are.

What Calf Growers Say

Dave Muhlenkamp

Ft. Recovery, Oh.

“Calves eat feed 2 to 4 days sooner and less scours.”

Buckeye Veal, Inc.

Wooster, Oh.

5,000 calves on feed

“Calves respond better and maintain health.”

Holstein Heifer World

Bluffton, In.

Irwin Swartz

“Calves have a heartier appetite.”
